Camas Habitat Worksheet

(Use with the Plant Habitat Image)

Name: _____

Look and Notice

The Camas Science Narrative teaches us that plants do not grow alone. They depend on conditions, relationships, and time.

Consider:

- What parts of this place help plants grow?
- Which parts of this place might support plants during different seasons?
- Which parts of this place help plants return year after year?

Use the Plant Habitat to show patterns.

On the image, you may:

- Circle areas that might provide water or moisture
- Sketch where sunlight reaches the ground
- Draw arrows to show relationships (water → plants, plants → pollinators)
- Add Camas, additional plants, sunshine, or animals that belong in this habitat
- Include short labels or notes to explain your thinking

Choose ONE thing you added to the habitat.

Explain why you placed it there using what you learned from the Camas Science Narrative.
