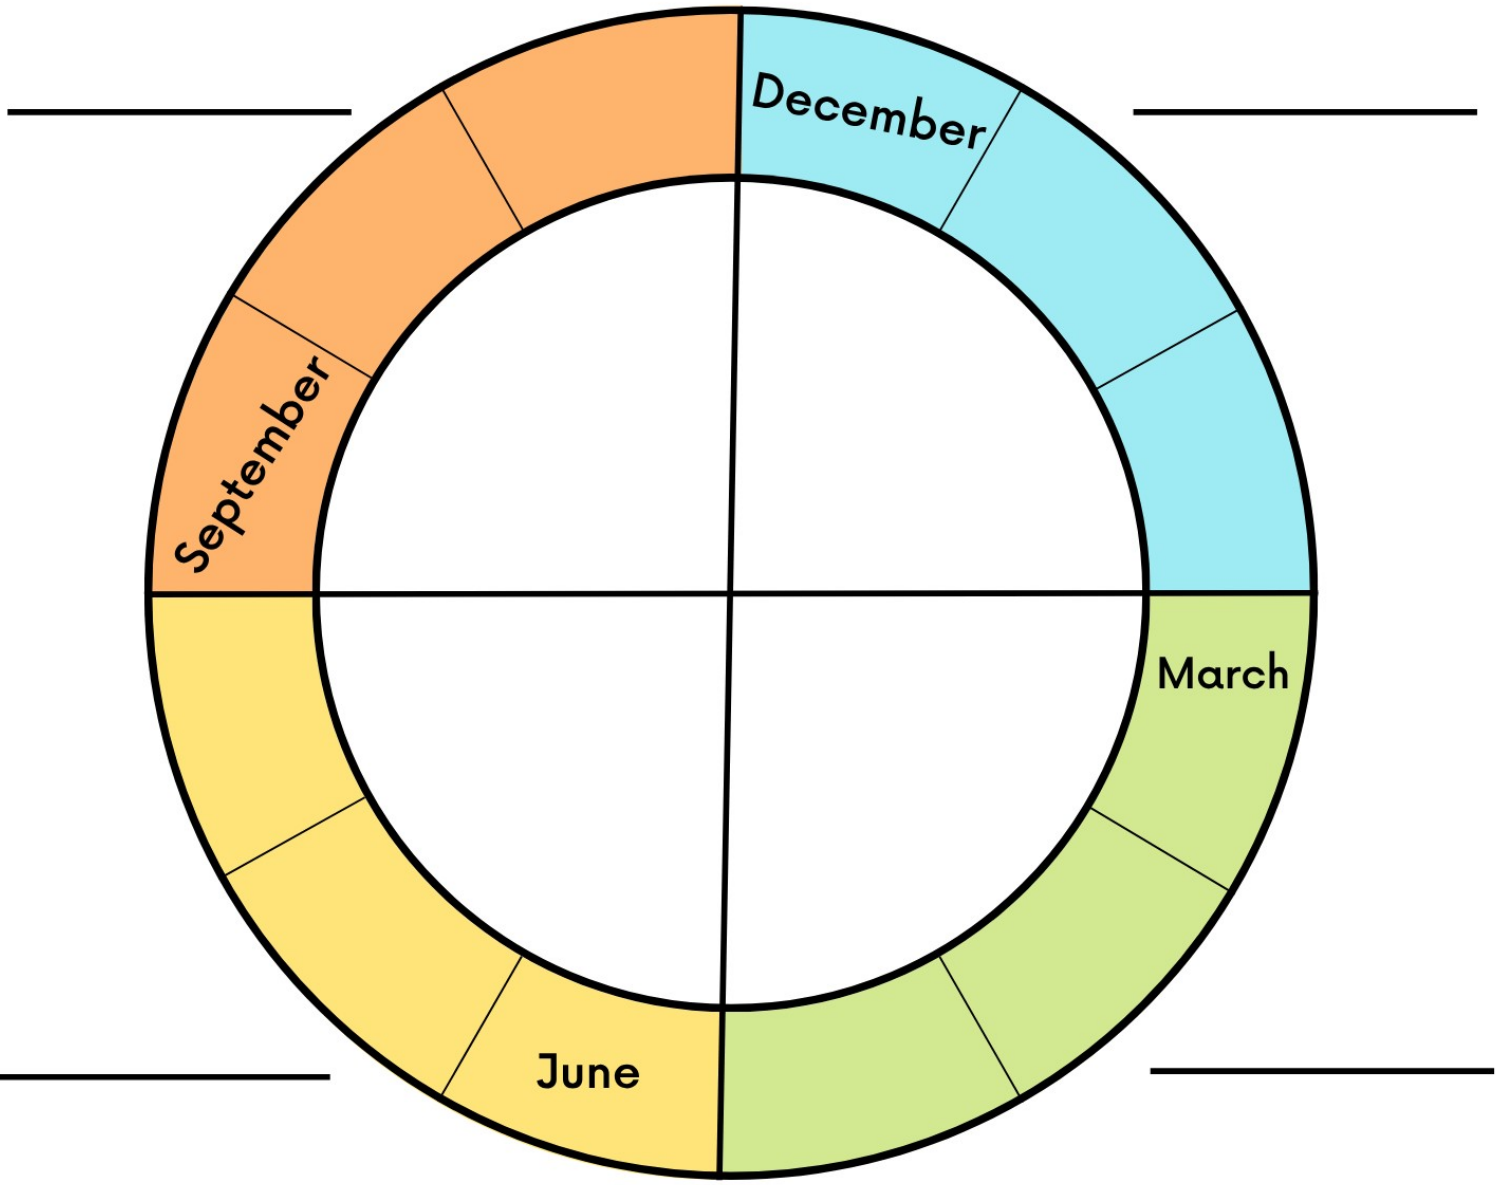
NAME: _____

PLANT LIFE CYCLE WORKSHEET

1. **Label the Season and Months:** Label each season on the circle. Then label the months, beginning with December.
2. **Show what plants do across the year:** Using drawings, words and symbols to show what you think plants might be doing during different times of the year. You can include what is happening above the ground and below the ground.
3. **Name the Life Cycle Phases**: Label each part of the plant life cycle using what you already know.



This round begins each season at a point in the year when light, temperature and growth patterns change in Oregon.
